"A prolactin-releasing peptide in the brain.";
Nature 393:272-276(1998).
"I FUNCTION: Stimulates prolactin (PRL) release and regula
expression of prolactin through its receptor GPRIO. May
lactotophs directly to secrete PRL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              30-MAY-2000 (Rel. 39, Created)

                                                         glycoconjugates.

CATALYTIC ACTIVITY: Hydrolysis of alpha-(2-3)-, alpha-(2-6)-,
alpha-(2-8)-glycosidic linkages of terminal stalle residues in
oligosaccharides, glycoproteins, glycolipids, colominic acid an
synthetic substrates.
SUBCELLULAR LOCATION: Membrane-associated (By similarity).
TISSUE SPECIFICITY: Expressed in brain.
SIMILARITY: BELONGS TO FAMILY 33 OF GLYCOSYL HYDROLASES.
SIMILARITY: CONTAINS 3 BNR REPEATS.

-i- CATALYTIC ACTIVITY: N-acetyl-1-glutamate 5-gemialdehyd.
-phosphate = N-acetyl-5-glutamyl phosphate + NADPH.
-i- PATHAR: THLME STEP IN ARGIAINE BIOSYNTHESIS.
-i- SIMILARITY: BELONGS TO THE NAGSA DEHYDROGENASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ARGC

1- FUNCTION: CONVERTS LYSOPHOSPHATIDIC ACID [LPA] INTO PHOSPHAT ACID BY INCORPORATING ACYL MOIETY AT THE 2 POSITION.

1- CATALYTIC ACTIVITY: Acyl-CoA + 1-acyl-sn-glycerol 3-phosphate.

1- CATALYTIC ACTIVITY: Acyl-CoA + 1-acyl-sn-glycerol 3-phosphate.

1- CATALYTIC ACTIVITY: BELOAUS STEP IN DE NOVO PHOSPHOLIPID BIOSYNTHESIS.

1- SUBCELLULAR LOCATION: Inner membrane-associated (Potential).

1- SIMILARITY: BELOAUS TO THE 1-ACYL-SN-GLYCEROL-3-PHOSPHATE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    STRAIN=26695 / ATCC 700392;
